

`concurrent_vector::
concurrent_vector`

`concurrent_vector::
emplace_back`

`concurrent_vector::
push_back`

`concurrent_vector::
try_reserve`

```
graph LR; A["concurrent_vector::  
concurrent_vector"] --> D["concurrent_vector::  
try_reserve"]; B["concurrent_vector::  
emplace_back"] --> D; C["concurrent_vector::  
push_back"] --> D;
```

The diagram illustrates a dependency or inheritance relationship. Three source functions, each in a white box with a black border, are on the left. Blue arrows point from each of these boxes to a single target function box on the right. The target box is shaded gray and has a black border. The source functions are `concurrent_vector::concurrent_vector`, `concurrent_vector::emplace_back`, and `concurrent_vector::push_back`. The target function is `concurrent_vector::try_reserve`.
