

```
pair<::FE::ASCII *,  
var::uint32 >
```

```
pair<::FE::ASCII *,  
var::boolean >
```

m_max_concurrency

m_enable_large_pages

```
program_option
```

The diagram illustrates a mapping from a single source to two different target types. At the bottom center is a gray rectangular box labeled 'program_option'. Two dashed purple arrows originate from the top corners of this box. The left arrow points to a white rectangular box containing the text 'pair<::FE::ASCII *, var::uint32 >'. The right arrow points to another white rectangular box containing the text 'pair<::FE::ASCII *, var::boolean >'. The labels 'm_max_concurrency' and 'm_enable_large_pages' are positioned between the arrows, indicating the specific options being mapped.
